

Standard Install for utility backup power applications*

Process repeated with two (separate) out of phase 120V inputs for dual inverter model **220D Flex** to achieve 3600 watts x 2 (7200 total watts, but split) out of phase at 120V. Or 3600 total watts at **240V & 120V**, 30 amps. 240V can also be achieved with single inverter system, and step up transformer at 15 amps maximum.

Install integrating AC Generator and/or Renewable Energy*

*All wiring must be done by licensed electrician.
