Owner’s Manual

This manual contains important safety instructions for gasoline generator models: G5000S, G8000S that should be followed during installation and maintenance of the generator and batteries.

READ SAFETY WARNINGS AND OPERATING INSTRUCTIONS CAREFULLY, SAVE THESE INSTRUCTIONS.

STANLEY Product Lines

Models: G5000S & G8000S

For more information or where to purchase STANLEY outdoor power equipment, visit us at: www.GXiOutdoorPower.com

Walk Behind Turf and Brush Mowers
- 36” Brush Mower
- HONDA GXV 530 V-twin engine
- Hydro Drive
- Convertible deck—easily converts to a finish mower.

Zero-Turn Commercial Mowers
- 54” and 62”
- HONDA GXV 530 V-twin engine
- Hydro Drive

Commercial Walk Behind Mowers
- 36” and 54” deck
- HONDA GXV 530 V-twin engine
- Belt drive or Hydro Drive

100” Tow Behind Mower
Model: 100TS
- Commercial duty STANLEY tow behind mower
- HONDA GXV 530 V-twin engine cuts up to 100 inches.
- 52 in. brush cut or a 52 in. finish cut mower with wings up.
Electric Pressure Washer
- 1450 psi to 1800 psi electric pressure washers
- 20 ft of high pressure hose and 35 ft. cord with GFCI protection
- Sleek and unique, high quality, stainless steel finish
- 13 Amps, 120V
- Auto-stop shut off system prolongs pump life

Generator Cord Accessories
240V, 10/4, heavy duty extension cords with L14-30 connectors at each end.
This cord reduces harmful voltage drops experienced when using most 120V extension cords. Available in 15' and 25' lengths and can be combined to reach the desired length.

Missing Parts Request Form

Please indicate the part that you are missing:

- Hardware bag
- Wheel Kit
- Other

Fax: 1-919-550-3277

Please scan and attach your proof of purchase to your e-mail.
This owner’s manual is considered a permanent part of the generator and should remain with the generator if resold. The information and specifications included in this publication were in effect at the time of approval for printing.

GXII Outdoor Power, LLC, reserves the right to discontinue or change specifications or design at any time without notice and without incurring any obligation whatever. No part of this publication may be reproduced without written permission.

EMISSION CONTROL SYSTEM INFORMATION

The U.S. and California Clean Air Acts
EPA and California regulations require all manufacturers to furnish written instructions describing the operation and maintenance of emission control systems. The following instructions and procedures must be followed in order to keep the emissions from your STANLEY engine within the emission standards. Maintenance, replacement, or repair of the emission control devices and systems may be performed by any engine repair establishment or individual, using parts that are “certified” to EPA standards.

SAFETY LABEL LOCATIONS

These labels warn you of potential hazards that can cause serious injury. Read them carefully. If a label comes off or becomes hard to read, contact your STANLEY generator dealer for a replacement.

SAFETY INFORMATION

STANLEY generators are designed to give safe and dependable service if operated according to instructions. Read and understand this owner’s manual before operating your generator.

OPERATOR RESPONSIBILITY

Know how to stop the generator quickly in case of emergency. Understand the use of all generator controls, output receptacles, and connections. Be sure that anyone who operates the generator receives proper instruction. Do not let children operate the generator.

WARNING

The engine exhaust from this product contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

DANGER

CARBON MONOXIDE GAS
Exhaust contains poisonous carbon monoxide, a colorless and odorless gas. Breathing exhaust can cause loss of consciousness and may lead to death. To keep exhaust gas from accumulating, use in an area with adequate ventilation. DO NOT use this generator near ventilation ducts or open windows that may allow exhaust gasses to enter your home or business. ONLY operate this generator outdoors.

DANGER

Fire and Burn Hazards
The exhaust system gets hot enough to ignite some materials.

- Keep the generator at least 3 feet (1 meter) away from buildings and other equipment during operation.
- Do not enclose the generator in any structure.
- Do not smoke when refueling.
- Keep flammable materials away from the generator.
- The muffler becomes very hot during operation and remains hot for a while after stopping the engine. Be careful not to touch the muffler while it is hot.
- Let the engine cool before storing the generator indoors.
- Refuel in a well ventilated area with the engine stopped.
- Fuel vapors are extremely flammable and may ignite after the engine has started. Make sure that any spilled fuel has been wiped up before starting the generator.

WARNING

Generator must be installed by a qualified electrician and connected to transfer equipment as a separately derived system in accordance with the National Electrical Code, NFPA 70. The generator shall be connected through transfer equipment that switches all conductors other than the equipment grounding conductor. The frame of the generator shall be connected to an approved grounding electrode.

Improper connections to a building electrical system can allow electrical current from the generator to backfeed into the utility lines. Such backfeed may electrocute utility company workers or others who contact the lines during a power outage, and the generator may explode, burn, or cause fires when utility power is restored.

Ground System
STANLEY portable generators have a system ground that connects generator frame components to the ground terminals in the AC output receptacles. The system ground is connected to the AC neutral wire.

Special Requirements
There may be Federal or State Occupational Safety and Health Administration (OSHA) regulations, local codes, or ordinances that apply to the intended use of the generator. Please consult a qualified electrician, electrical inspector, or the local agency having jurisdiction.

This generator does not meet US Coast Guard regulation 33 CFR-183 and should not be used on marine applications.
AC Applications

Before connecting an appliance or power cord to the generator:
1. Make sure that appliances are in good working order. Faulty appliances or power cords can create a potential for electrical shock. If an appliance begins to operate abnormally, becomes sluggish or stops suddenly, turn it off immediately.
2. Disconnect the appliance, and determine whether the problem is the appliance, or if the rated load capacity of the generator has been exceeded.
3. Make sure that the electrical rating of the tool or appliance does not exceed that of the generator. Never exceed the maximum power rating of the generator. Power levels between rated and maximum may be used for no more than 30 minutes.

Substantial overloading will open the circuit breaker. Exceeding the time limit for maximum power operation or slightly overloading the generator may not switch the circuit breaker or circuit protector OFF, but will shorten the service life of the generator.

Limit operation requiring maximum power to 30 minutes. For continuous operation (longer than 30 minutes), do not exceed 80% of the rated power balanced equally on the A&B sides of the Alternator.

Changing the speed of the generator by adjusting the governor can cause damage to the generator, devices attached to the generator, and may result in bodily injury. Do not adjust or tamper with the engine speed setting.

Component Identification

Generator models may have different features and/or options than shown in these diagrams. STANLEY reserves the right to alter product features and specifications without notice.

- Fuel Tank
- Fuel Cap
- Choke Lever
- Air Filter
- Fuel Valve
- Recoil Starter (Assembly)
- Digital Meter
- L14-30 240V/120V Twist Lock Connector
- Remote Generator Panel
- ON/OFF Switch
- Main Breaker
- On/Off & Start Switch (electric start option)
- Main Breaker
- L14-30 240V/120V Twist Lock Connector
- Pull Out Handle Bars
- Carburetor
- Valve Cover
- Battery (electric start option only)
- Alternator
- Exhaust Pipe
- Muffler Guard
- Ground Lug
Additional equipment required to safely operate this generator:
1. Gas can.
2. Unleaded gasoline.
3. SAE 10W-30 - 1.1 quarts for STANLEY 11hp, 13hp, 14hp, and 15hp engines, 0.9 quarts required for STANLEY 10 HP.
4. An oil fill funnel.
5. Gasoline fuel stabilizer (for storing your generator).
6. 120V and/or 240V extension cords.
7. An adjustable wrench or a 12mm socket for oil changes.

Note: A spark arrestor was supplied with your generator and must be installed for use within the State of California. See supplemental instructions.
**Commissioning the Battery**

The battery is an optional feature. The battery is used to start a generator equipped with an electric starter. Not all generators are sold with batteries. Please verify with your retailer if you believe the battery is missing.

**WARNING**

Lead acid storage batteries contain sulfuric acid which can cause serious injuries. The battery also gives off explosive gases. Keep sparks, flames and cigarettes away. Provide adequate ventilation when charging or using batteries. Battery posts, terminals and related accessories contain lead and lead compounds. Avoid spills of electrolyte and wash hands thoroughly after handling. Use gloves and safety glasses when handling and installing lead acid batteries.

If you get electrolyte in your eyes, flush your eyes with clean water for 15 minutes and seek medical attention. Keep out of reach of children.

FOR YOUR SAFETY AND CONVENIENCE, THE BATTERY WAS SHIPPED SEALED AND PRE-CHARGED.

The battery is ready to be connected to the generator.

To connect the battery, use an adjustable wrench or 8 mm socket to secure the BLACK wire to the negative (-) terminal and the RED wire to the positive (+) terminal. Do not allow the wrench to contact any other part of the generator when tightening the battery terminals.
### Controls

**Models: G5000S & G8000S**

#### Recoil Starter

To start the engine, pull the starter grip lightly until resistance is felt, then pull briskly.

**NOTICE:** Do not allow the starter grip to snap back against the engine. Return it gently to prevent damage to the starter.

The recoil starter is used to start the engine if the generator is not equipped with a 12 volt battery to operate the starter motor, or if the battery does not contain adequate charge to operate the starter motor.

#### Choke Rod

The choke is used to provide an enriched fuel mixture when starting a cold engine. It can be opened and closed by operating the choke rod manually. Pull the rod out toward CLOSED to enrich the mixture for cold starting. Open once the engine is running.

#### Fuel Valve Lever

The fuel valve is located between the fuel tank and carburetor. When the valve lever is in the ON position, fuel is allowed to flow from the fuel tank to the carburetor. Be sure to return the fuel valve lever to the OFF position after stopping the engine.

#### Engine Switch

To start and stop the engine.

#### Oil Alert System

The Oil Alert system is designed to prevent engine damage caused by an insufficient amount of oil in the crankcase. Before the oil level in the crankcase can fall below a safe limit, the Oil Alert system will automatically stop the engine (the engine switch will remain in the ON position). The Oil Alert system should not take the place of checking the oil level before each use. If the engine stops and will not restart, check the engine oil level (see page 14) before troubleshooting in other areas.

#### Ground Terminal

The generator ground terminal is connected to the frame of the generator, the metal non-current-carrying parts of the generator, and the ground terminals of each receptacle.

**WARNING**

RECOIL STARTER

STARTER GRIP

NOTE: SYSTEM GROUND IS CONNECTED TO THE AC NEUTRAL ON THIS GENERATOR. CONSULT AN ELECTRICIAN WHEN CONNECTING THIS GENERATOR TO YOUR HOME OR BUSINESS ELECTRICAL PANEL TO ENSURE GROUNDING MEETS THE LOCAL ELECTRICAL CODE

---

*STANLEY is a registered trademark of The Stanley Works or its affiliates and are used under license by GXi Outdoor Power LLC. No part of this publication can be printed or copied without written permission.*
Operating the Generator

Models: G5000S & G8000S

Step 1.
Ensure all electrical loads are removed from the generator. Disconnect all the extension cords and ensure the main breaker is in the OFF position. Remove all flammable materials and debris from the area. Make sure the generator is level.

Step 2.
Check the oil level.
- Put the generator on a level surface with the engine stopped.
- Remove the oil filler cap.
- Check the oil level. If the oil level is low, fill it until the oil is overflowing. It will take approximately 0.9 - 1.5 quarts of oil depending on the model of generator.

If additional oil is need, SAE 10W-30 engine oil is recommended for most general purpose applications. In cold weather climate, use SAE 5W-30.

Step 3.
Make sure there is fuel in the gasoline tank. Look at the fuel level indicated by removing the fuel cap to inspect the contents of the fuel tank. The fuel filter can also be inspected once the fuel cap is removed. Ensure the fuel filter is clean of dirt and debris. Tightly secure the fuel cap after your inspection is complete.

Fuel can damage paint and plastic. Be careful not to spill fuel when filling your fuel tank. Damage caused by spilling fuel is not covered under warranty. Use unleaded gasoline with a pump octane rating of 86 or higher. This engine is certified to operate on unleaded gasoline. Unleaded gasoline produces fewer engine and spark plug deposits and extends exhaust system life. Never use stale or contaminated gasoline or an oil/gasoline mixture. Avoid getting dirt or water in the fuel tank.

CARBON MONOXIDE GAS
Using a generator indoors CAN KILL YOU IN MINUTES.
Generator exhaust contains carbon monoxide (CO). This is a poison you cannot see or smell. If you can smell the generator exhaust, you are breathing CO. But even if you cannot smell the exhaust, you could be breathing CO.

NEVER use a generator inside homes, garages, crawlspaces, or other partly enclosed areas. Deadly levels of carbon monoxide can build up in these areas. Using a fan or opening windows and doors does NOT supply enough fresh air.

ONLY use a generator outside and far away from windows, doors, and vents. These openings can pull in generator exhaust.

Even when you use a generator correctly, CO may leak into the home. ALWAYS use a battery-powered or battery-backup CO alarm in the home.

If you start to feel sick, dizzy, or weak after the generator has been running, move to fresh air RIGHT AWAY. See a doctor. You could have carbon monoxide poison.

Electrocution hazard - Electricity can cause DEATH or SERIOUS INJURY.
- Do not operate the generator in standing water.
- This product is not safe to operate when partially or totally submerged in water.
- Ensure proper drainage in the region surrounding this generator.
- Properly ground the generator and verify ground is in place before each use. Grounding regulations vary by location, consult a qualified local electrician for proper grounding instructions.
- Power cords and electrical equipment pose a risk of shock and electrocution, especially if they are operated in wet conditions. Inspect all equipment prior to every use and use only as directed by the manufacturer.
- Use a cord with GFCI protection when using the power outdoors or when moisture is present.
- Generators vibrate in normal use. During and after the use of the generator, inspect the generator as well as extension cords and power supply cords connected to it for damage resulting from vibration. Have damaged items repaired or replaced as necessary. Do not use plugs or cords that show signs of damage such as broken or cracked insulation or damaged blades.

NEVER START OR STOP THE ENGINE WITH DEVICES CONNECTED TO THE GENERATOR.

WARNING
DO NOT overfill the tank. Leave a 1 inch air gap in the tank. Gasoline is highly flammable and explosive. You can be burned or seriously injured when refueling.
- Stop engine and keep heat, sparks, and flame away.
- Refuel only outdoors.
- Wipe up spills immediately.
This portable generator is not for use with gasoline/ethanol blends with over 15% ethanol.
Operating the Generator

Models: G5000S & G8000S

Step 4.
Set the fuel valve lever to the ON position by rotating it clockwise.

Step 5.
Pull the choke lever to the CLOSED position. See page 7 for a diagram of the choke lever.

Step 6.
Turn the generator ON/OFF switch to the “ON” position.

Step 7.
Start the engine

1. If you have an electric starter, turn the switch to the START position, hold it there for 5 seconds and let it come to rest in the ON position once the engine has started.
2. If you are using the recoil starter, pull slightly on the cord until you feel some pressure. Once you feel the back-pressure building, rapidly pull the cord.

Step 8.
Once the generator is running, push the choke lever into the OPEN position.

Step 9.
Let the generator warm up for approximately 3 minutes before applying any electrical loads.

Step 10.
Apply loads to the generator one at a time, allowing the generator to stabilize after you add each incremental load. Add the loads with the largest surge power requirement first. This would include refrigerators, air-conditioners, large motors, and pumps. Add smaller loads once the generator has stabilized with the larger loads.

ALWAYS UNPLUG APPLIANCES AND REMOVE ALL ELECTRICAL LOADS BEFORE REFUELING. THEN FOLLOW STEPS 2 - 10.

To determine maximum load that you may safely connect to this generator:

1. Calculate the maximum continuous power required by adding up the running power of each appliance. The total running power of your appliances cannot exceed the maximum output power of this generator.

2. Calculate the surge power by:
   i) Adding up the running power of each appliance with an * and in bold below.
   ii) Multiplying the total by 1.5.
   iii) Adding this to the total running power calculated in step 1 above.

The surge power requirements of your appliances cannot exceed the surge power rating of this generator.

Typical Residential Loads

STOPPING THE GENERATOR

In an emergency:
To stop the engine in an emergency, move the engine switch to the OFF position and turn the fuel valve OFF.

In normal use:
1. Turn the AC circuit breaker to the OFF position (if applicable).
2. Disconnect all loads and extension cords.
3. Allow the engine to run with no load for 3 minutes.
4. Turn the engine switch to the OFF position.
5. Turn the fuel valve lever to the OFF position.
6. Allow the generator to cool off before touching any engine or alternator components. It may take as long as 30 minutes before the generator is cool enough to touch safely.
MAINTENANCE

The Importance of Maintenance
Good maintenance is essential for safe, economical, and trouble-free operation. It will also help reduce air pollution.

To help you properly care for your generator, the following pages include a maintenance schedule, routine inspection procedures, and simple maintenance procedures using basic hand tools. Other service tasks that are more difficult, or require special tools, are best handled by professionals and are normally performed by a STANLEY technician or other qualified mechanic.

The maintenance schedule applies to normal operating conditions. If you operate your generator under severe conditions, such as sustained high-load or high-temperature operation, or use it in unusually wet or dusty conditions, consult your servicing dealer for recommendations applicable to your individual needs and use.

Maintenance, replacement, or repair of the emission control devices and systems may be performed by any engine repair establishment or individual, using parts that are “certified” to EPA standards.

* Should be performed by an authorized STANLEY service center.

Replacement Parts
The emission control systems on your STANLEY engine were designed, built, and certified to conform with EPA and California emission regulations. We recommend the use of genuine STANLEY parts whenever you have maintenance done. These original-design replacement parts are manufactured to the same standards as the original parts, so you can be confident of their performance. The use of replacement parts that are not of the original design and quality may impair the effectiveness of your emission control system.

A manufacturer of an aftermarket part assumes the responsibility that the part will not adversely affect emission performance. The manufacturer or rebuilder of the part must certify that use of the part will not result in a failure of the engine to comply with emission regulations.

Engine Oil Change
Drain the oil while the engine is warm to assure rapid and complete draining.

1. Remove the drain plug and sealing washer, remove the oil filler cap, and drain the oil.
2. Reinstall the drain plug and sealing washer. Tighten the plug securely.
3. Refill with the recommended oil (SAE 10W-30) and check the oil level.

Dispose of used motor oil in a manner that is compatible with the environment. Do not throw it in the trash, pour it on the ground, or down a drain.

Air Cleaner Service
A dirty air cleaner will restrict air flow to the carburetor. To prevent carburetor malfunction, service the air cleaner regularly. Service more frequently when operating the generator in extremely dusty areas.

NOTICE:
Never run the generator without the air filter. Rapid engine wear will result.

1. Unsnap the air cleaner cover clips, remove the air cleaner cover, and remove the element.
2. Wash the air cleaner element in a solution of household detergent and warm water, then rinse thoroughly, or wash in nonflammable or high flashpoint solvent. Allow the air cleaner element to dry thoroughly.
3. Soak the air cleaner element in clean engine oil and squeeze out the excess oil. The engine will smoke during initial startup if too much oil is left in the air cleaner element.
4. Reinstall the air cleaner element and the cover.

Fuel Filter Cleaning

The fuel filter cup/screen prevents dirt which may be in the fuel from entering the carburetor. The fuel filter should be inspected and cleaned on a regular basis. For best results, clean the filter with gasoline and a toothbrush or blow the debris out of the filter with air pressure.

Spark Plug Service

In order to service the spark plug, you will need a spark plug wrench. Recommended spark plugs: BPR5ES (NGK) and W16EPR-U (DENSO). To ensure proper engine operation, the spark plug must be properly gapped and free of deposits.

If the engine has been running, the muffler will be very hot. Be careful not to touch the muffler.

1. Remove the spark plug cap.
2. Clean any dirt from around the spark plug base.
3. Use a spark plug wrench to remove the spark plug.
4. Visually inspect the spark plug. Discard it if the insulator is cracked, chipped or fouled.
5. Measure the plug gap with a feeler gauge. Correct as necessary by carefully bending the side electrode. The gap should be: 0.028 to 0.031 in (0.70 to 0.80 mm)

6. Check that the spark plug washer is in good condition, and thread the spark plug in by hand to prevent cross-threading.
7. After the spark plug is seated, tighten with a spark plug wrench to compress the washer.

If installing a new spark plug, tighten 1/2 turn after the spark plug seats to compress the washer. If reinstalling a used spark plug, tighten 1/8 to 1/4 turn after the spark plug seats to compress the washer.

NOTICE:
The spark plug must be securely tightened. An improperly tightened spark plug can become very hot and could damage the engine. Use only the recommended spark plugs or equivalent.

Optional Spark Arrester Maintenance
If the generator has been running, the muffler will be very hot. Allow it to cool before proceeding. The spark arrester must be serviced every 50 hours to keep it functioning as designed.

Clean the spark arrester as follows:
1. Loosen the screw by the exhaust port of the muffler and remove the spark arrester.
2. Use a brush to remove carbon deposits from the spark arrester screen. Inspect the screen for breaks or tears and replace it if necessary.
3. Install the spark arrester in the reverse order of removal.

Optional Starter Motor Fuse Replacement
If the fuse is blown, the starter motor won’t operate. Turn the engine switch to the OFF position. Remove the fuse holder cover and replace the fuse. The specified fuse is 10A.

NOTICE:
Never use a fuse with a different rating from that specified. Serious damage to the electrical system or fire may result.

TRANSPORTING
When transporting the generator, turn the engine switch and the fuel valve OFF. Keep the generator level to prevent fuel spillage. Fuel vapor or spilled fuel may ignite.

Take care not to drop or strike the generator when transporting. Do not place heavy objects on the generator. When transporting the generator by loading it on to a vehicle, secure to the generator frame as shown.

DANGER
Contact with a hot engine or exhaust system can cause serious burns or fires. Let the engine cool before transporting or storing the generator.

STORING
Before storing the unit for an extended period:
1. Be sure the storage area is free of excessive humidity and dust.
2. Service according to the table below:

<table>
<thead>
<tr>
<th>STORAGE TIME</th>

* Use gasoline stabilizers that are formulated to extend storage life. Contact your authorized STANLEY generator dealer for conditioner recommendations.

Storage Preparation
1. Drain the carburetor by loosening the drain screw. Drain the gasoline into a suitable container. Place 4 ounces of fuel stabilizer in the fuel tank.
2. Change the engine oil (page 10).
3. Remove the spark plug, and pour about a tablespoon of clean engine oil into the cylinder. Turn the engine several revolutions slowly with the recoil starter to distribute the oil, then reinstall the spark plug.
4. Slowly pull the starter grip until resistance is felt. At this point, the piston is coming up on its compression stroke and both the intake and exhaust valves are closed. Storing the engine in this position will help to protect it from internal corrosion.

WARNING
Gasoline is extremely flammable and is explosive under certain conditions. Perform this task in a well-ventilated area with the engine stopped. Do not smoke or allow flames or sparks in the area during this procedure.
## Troubleshooting

<table>
<thead>
<tr>
<th>Symptom:</th>
<th>Potential Causes</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Engine won’t start</strong></td>
<td>Fuel valve off/out of fuel</td>
<td>Fill tank with fuel and turn fuel valve on</td>
</tr>
<tr>
<td></td>
<td>Engine Switch in off position</td>
<td>Turn engine switch to on position</td>
</tr>
<tr>
<td></td>
<td>Spark arrestor clogged</td>
<td>Remove spark arrestor, clean and replace.</td>
</tr>
<tr>
<td></td>
<td>Choke is open</td>
<td>Close choke by pulling choke handle out. Open choke after starting.</td>
</tr>
<tr>
<td></td>
<td>Oil level too low</td>
<td>Fill oil to top of opening with recommended grade of oil.</td>
</tr>
<tr>
<td></td>
<td>Oil float stuck in shipment</td>
<td>Fill oil to top of opening, disconnect the yellow wire from the low oil level switch. The switch is located on the engine above the oil drain plug. It is a small gold colored box with a yellow and a black wire. Start the unit and run it for one hour minimum - this will get enough movement of hot oil to free the float if this is the cause. Re-attach the yellow wire and run the unit.</td>
</tr>
<tr>
<td></td>
<td>Fuel filter is dirty</td>
<td>Check for fuel flow to carburetor by removing drain screw. Clean or replace fuel filter.</td>
</tr>
<tr>
<td></td>

*LENGTH OF WARRANTY: All warranty coverage except emission controls expires when the operating hours exceed 200 hours.*

**TO QUALIFY FOR THIS WARRANTY:**

The product must be purchased in the United States from a dealer authorized by GXi Outdoor Power, LLC to sell those products. This warranty applies to first retail purchaser/owner during the applicable warranty time period. SAVE YOUR PROOF OF PURCHASE RECEIPT.

**WHAT STANLEY POWER EQUIPMENT WILL REPAIR OR REPLACE UNDER WARRANTY:**

STANLEY will repair or replace, at its option, any part that is proven to be defective in material or workmanship under normal use during the applicable warranty time period subject to the exclusions stated herein. This warranty is void if the owner fails to follow the prescribed maintenance and operating procedures described in this manual. This specifically refers to ensuring routine oil changes are made, that fuel stabilizer is used for long-term storage, that the generator is not overloaded, and that the generator loads are distributed evenly between the A and B outlets. Dirty carburetors, spark plugs, air filters, fuel filters, and freight or handling damage are not covered under warranty.

STANLEY has the right to recover warranty administration costs from the owner if the root cause of the malfunction was found to be other than defective material or workmanship. In particular, this warranty does not cover: contaminants in the fuel or oil; damage caused by not following the prescribed warnings and operating practices; failure to follow proper maintenance and storage procedures; and physical damage due to shipping or handling or storage. Damage to the generator that occurs as a result of connecting a STANLEY generator to household wiring without the use of a UL approved transfer switch device that is connected to the home or business and grounded as per applicable local electrical codes, is not covered by this warranty.

Warranty repairs will be made without charge for parts and labor for the first year. After the first year, this limited warranty covers the costs of replacement parts only.

**TO OBTAIN WARRANTY SERVICE:**

You must take the STANLEY Power Equipment product, accessory, replacement part, apparel or the power equipment on which the accessory or replacement part is installed, and proof of purchase, at your expense, to any STANLEY Power Equipment service location in the United States, who is authorized to service that product, during the service location’s normal business hours. If you are unable to obtain warranty service, or are dissatisfied with the warranty service you receive, take the following steps: First, contact the manager of the service center involved; normally this will resolve the problem. However, if you should require further assistance,

**EXCLUSIONS:**

This warranty does not extend to parts affected or damaged by accident and/or collision, normal wear, fuel contamination, use in an application for which the product was not designed or any other misuse, neglect, incorporation or use of unsuitable attachments or parts, unauthorized alteration, or any causes other than defects in material or workmanship of the product. Consumable parts such as oil, spark plugs, filters, carburetors, are not covered by this warranty.

**DISCLAIMER OF CONSEQUENTIAL DAMAGE AND LIMITATION OF IMPLIED WARRANTIES:**

STANLEY DISCLAIMS ANY RESPONSIBILITY FOR LOSS OF TIME OR USE OF THE PRODUCT, TRANSPORTATION, COMMERCIAL LOSS, OR ANY OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGE. ANY IMPLIED WARRANTIES ARE LIMITED TO THE DURATION OF THIS WRITTEN LIMITED WARRANTY.

This warranty is void if the manufacturing date and the serial number on the equipment has been removed or the equipment has been modified.

**EMISSION CONTROL SYSTEM INFORMATION**

The U.S. and California Clean Air Acts

EPA and California regulations require all manufacturers to furnish written instructions describing the operation and maintenance of emission control systems. The following instructions and procedures must be followed in order to keep the emissions from your STANLEY engine within the emission standards. Maintenance, replacement, or repair of the emission control devices and systems may be performed by any engine repair establishment or individual, using parts that are “certified” to EPA standards.

The emission control systems on your STANLEY engine were designed, built, and certified to conform with EPA regulations. We recommend the use of genuine STANLEY parts whenever you have maintenance done. These original-design replacement parts are manufactured to the same standards as the original parts, so you can be confident of their performance. The use of replacement parts that are not of the original design and quality may impair the effectiveness of your emission control system. A manufacturer of an aftermarket part assumes the responsibility that the part will not adversely affect emission performance. The manufacturer or re-builder of the part must certify that use of the part will not result in a failure of the engine to comply with emission regulations.

Emission controls are covered by this warranty for all uses for a period of 2 years from original retail purchase date, this coverage extends to subsequent owners of the product with proof of original purchase. For emissions warranty service call 1-800-393-0888 or e-mail customerservice@gxioutdoorpower.com.
